

"Alleviating Adverse Effects of Natural Disasters on Poor Segments of Society in the OIC Member Countries"

by Seyit Mümin Cılasun

THE 23RD MEETING OF THE COMCEC POVERTY ALLEVIATION

WORKING GROUP

(Sept 16, 2024)

Presentation Plan

Motivation, Aim and Scope Methodology **Survey Findings**

MOTIVATION, AIM & SCOPE

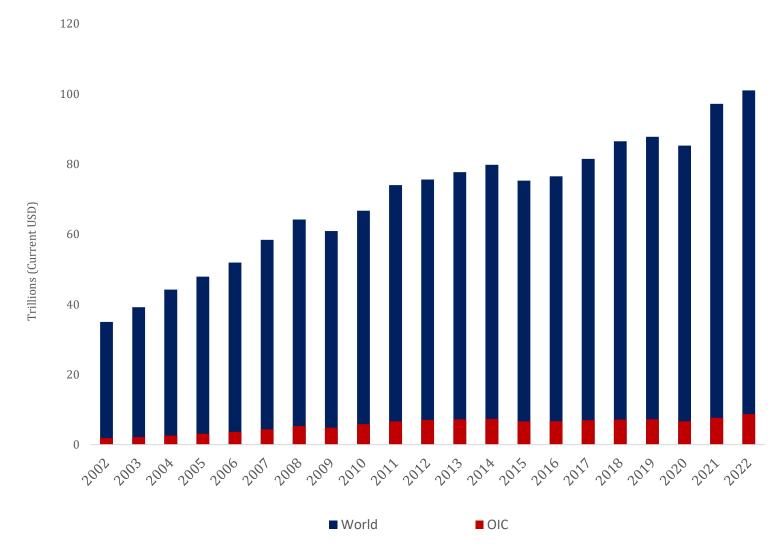

One of the main problems of OIC region is poverty.

OIC and World Economy

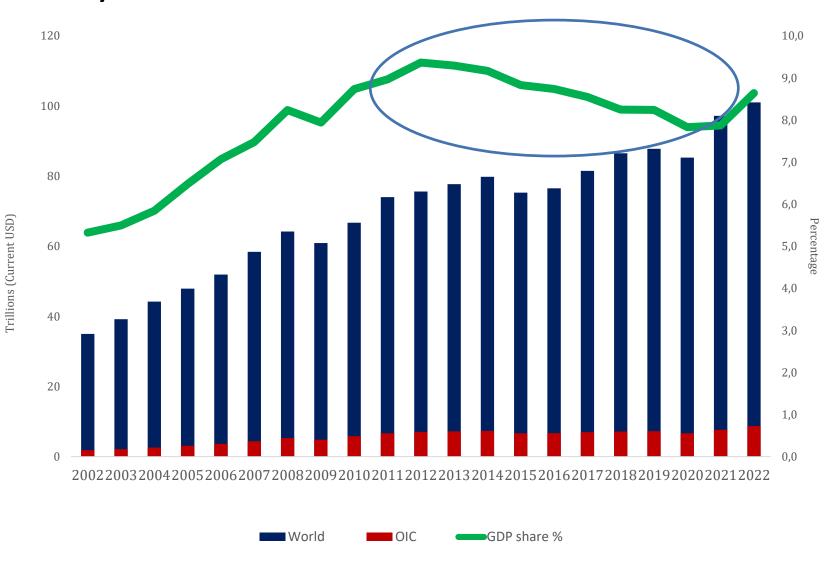

The global economy is consistently expanding.

OIC economy is growing.

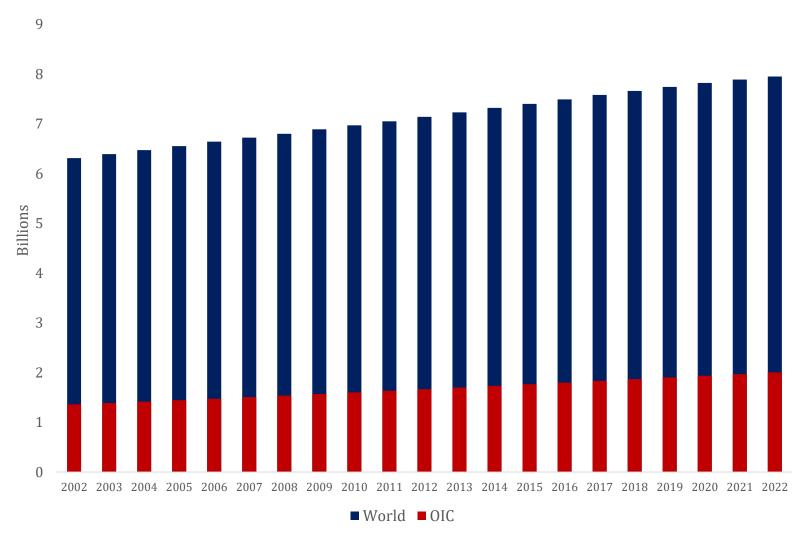

OIC and World Economy

But the share of OIC in global GDP decreased.

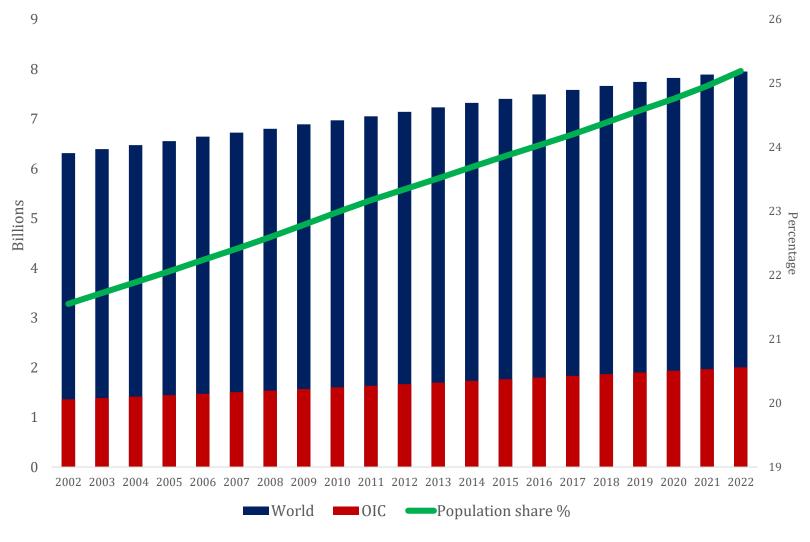

Population

World and OIC population increased

Population

The share of OIC population in world population increased

GDP per capita in OIC Countries, Current US Dollar, 2022

| Low Income | | Lower-middle Income | | Upper-middle Income | | High Income | |
|--------------|-------|---------------------|-------|---------------------|--------|--------------|--------|
| Afghanistan | 356 | Tajikistan | 1,054 | West B. & Gaza | 3,789 | Guyana | 18,199 |
| Syria | 421 | Benin | 1,303 | Indonesia | 4,788 | Oman | 25,057 |
| Sierra Leone | 476 | Comoros | 1,485 | Suriname | 5,859 | Bahrain | 30,147 |
| Mozambique | 558 | Guinea | 1,515 | Iraq | 5,937 | Saudi Arabia | 30,448 |
| Niger | 585 | Cameroon | 1,563 | Libya | 6,716 | Brunei | 37,152 |

Notes: Estimates for Afghanistan, Lebanon, and Syria are based on the year 2021.

Population Living Below Monetary Poverty Line in OIC Countries

Many member countries exhibit national poverty levels higher than the average for developing countries.

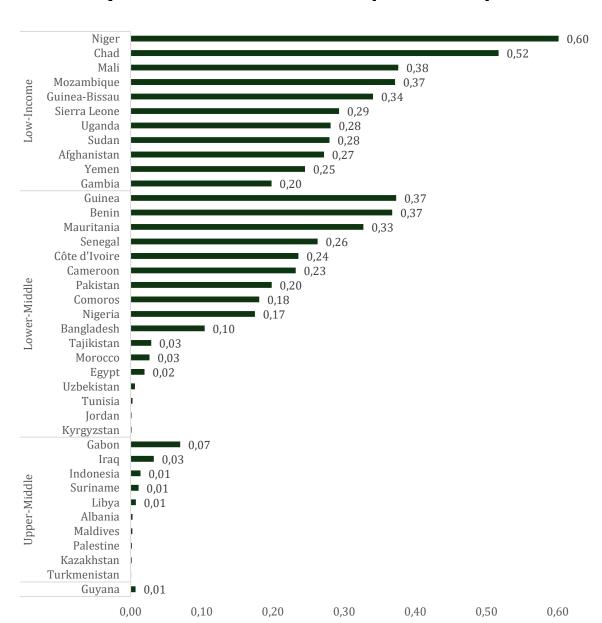

Note: Estimates based on surveys for 2011-2022. National Poverty Line implies a percentage of the population living below the national poverty line, which is the poverty line deemed appropriate for a country by its authorities. National estimates are based on population-weighted subgroup estimates from household surveys. International Poverty Line implies a percentage of the population living below the international poverty line of \$2.15 (in 2017 purchasing power parity [PPP] terms) a day.

Data Source: World Bank and UNDP

Multidimensional Poverty Index for OIC (UNDP)

Multidimensional poverty is high among OIC countries.

0,70

Multidimensional Poverty Headcount Ratio for OIC (World Bank)

More than 70 percent of the populations in Niger, Chad, and Mozambique are living in poverty.

| | | Deprivation rate (share of population) | | | | | | MP |
|----------------|-----------|--|----------------|-----------------------|--------------------|-------------------|--------------|------------------------|
| Country | Year | Monetary (%) | Attainment (%) | Enroll ment (%) | Electricity (%) | Sanitation (%) | Water (%) | headcount ratio (%) |
| Niger | 2018 | 50.9 | 75.1 | 42.6 | 78.7 | 85.2 | 37.5 | 79.9 |

| Mudslide | 15 | 1,542 | 167 | |
| Tornado | 14 | 200 | 95 | |
| Severe winter conditions | 12 | 1,625 | 2,500 | |
| Tsunami | 10 | 171,572 | 2,700 | |
| Wildfire (General) | 9 | 191 | 221 | |

Data Source: EM-DAT, CRED / UC Louvain, Brussels, Belgium

Disasters Occurred in OIC between 2000-2024, by country

Indonesia experienced
the highest number of
disasters with 384
occurrences, followed by
Afghanistan with 168
disasters, and Pakistan
with 165 disasters.

Indonesia suffered the highest loss of life, with 189,320 fatalities due to disasters. In Pakistan, 88,090 lives were lost over the past 25 years. Türkiye recorded the third-highest number of fatalities, with 52,597 lives lost.

| Country | #Disasters | #Death | #affected | Country | #Disasters | #Death | #affected |
|-------------------------------|------------|---------|-----------|-------------------------|------------|--------|-----------|
| Afghanistan | 168 | 15,538 | 34,000 | Malaysia | 78 | 479 | 3,400 |
| Albania | 25 | 433 | 1,100 | Mali | 38 | 400 | 14,000 |

Motivation

The OIC region faces a dual challenge of widespread poverty and frequent natural disasters.

90 percent of disaster-related deaths occurred in low and middle-income countries

Natural disasters disproportionately impact the poorest communities, worsening existing vulnerabilities and hindering long-term development efforts.

Aim

The primary aim of the project is to develop a comprehensive handbook that serves as a practical guide for alleviating the adverse effects of natural disasters on the poorest segments of society in OIC member countries.

This involves addressing socio-economic vulnerabilities, enhancing disaster resilience, and improving disaster preparedness and response systems.

Report Structure

Chapter 1

- Overview of displacement, exposure, and humanitarian needs in OIC countries.
- Analysis of international agreements guiding disaster management.
- Legal framework analysis for existing laws and policies.

Chapter 2

- Survey results on disaster resilience in OIC countries.
- Field and desk studies.

Chapter 3

- Handbook of guiding principles and best practices for disaster management, including:
 - Awareness campaigns
 - Community participation
 - Information systems
 - Governance structures

Key Areas

Poverty alleviation through resilient infrastructure and disaster management systems.

Disaster preparedness with a focus on disadvantaged and exposed groups.

Capacity building to enhance local disaster response mechanisms.

Methodology

Survey

Legal Framework

International Agreements, Protocols and Conventions

Country Experiences

- Field Visits (Türkiye and Egypt)
- Desk-Based Case Studies (Japan, Indonesia and Nigeria)

Some findings

Many OIC countries have developed DRR strategies, but gaps remain in budget and capacity.

NGOs play a critical role particularly in terms of education and direct aid.

Government focus on coordination but face challenges in legal and administrative frameworks

SURVEY

Aim and Participants

The survey is designed to assess current capabilities and identify gaps, with the goal of developing effective strategies to mitigate the impact of natural disasters.

Two types of Participants: **Government Institutions** and **NGOs**

Questionnaire Design

1. Information on respondent

2. Existence and implementation of national DRR strategies or policies, and the role of the respondent's institution in these processes

3. Disaster preparedness, response, and recovery

4. Existing frameworks and collaboration efforts

Sample

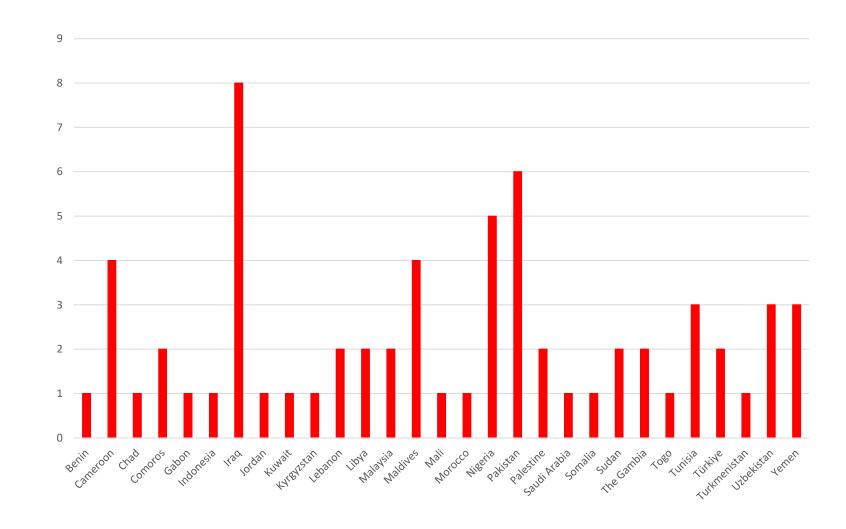

Sent emails to 260 government institutions and 535 NGOs

13 government entities and 52 NGOs (65 in total) have responded

Distribution of Participants by Country

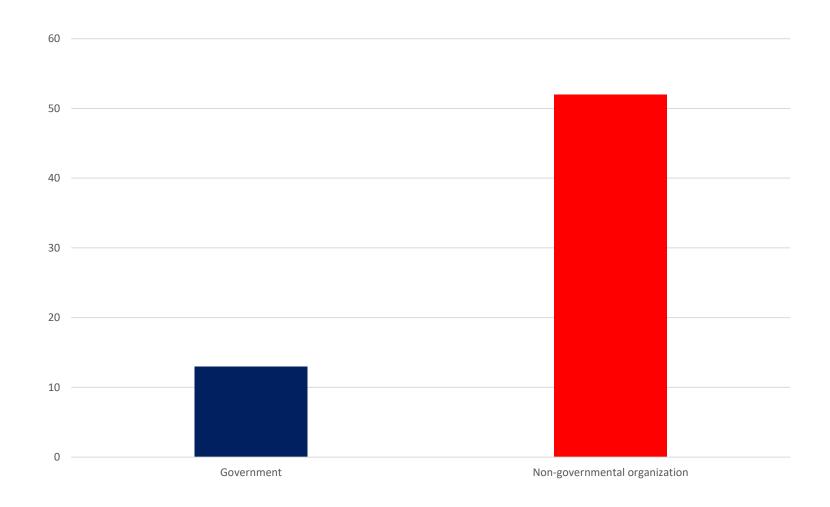

Iraq had the highest number of responses with 8 participants, followed by Pakistan with 6 participants.

Nigeria contributed 5 responses, while both Cameroon and the Maldives had 4 participants each.

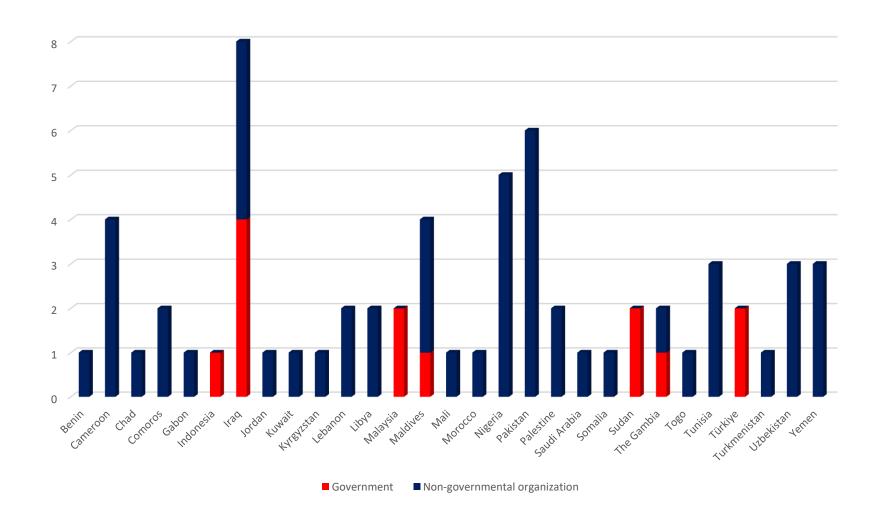

Sectoral Distribution of Participants

52 respondents are from NGOs and 13 respondents are from government institutions

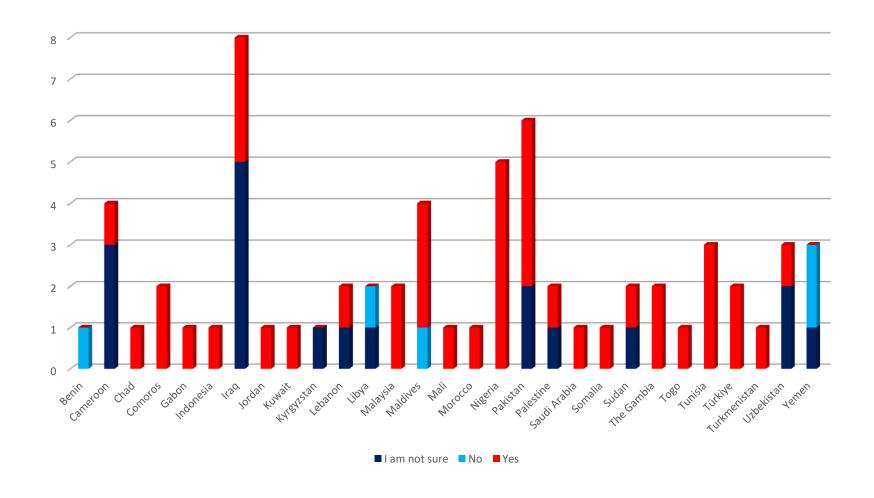

Sectoral Distribution of Participants by Country

Responses from
government
institutions have
been received from 7
countries: Indonesia,
Iraq, Malaysia,
Maldives, Sudan, The
Gambia, and Türkiye.

Existence of DRR Strategy by Country

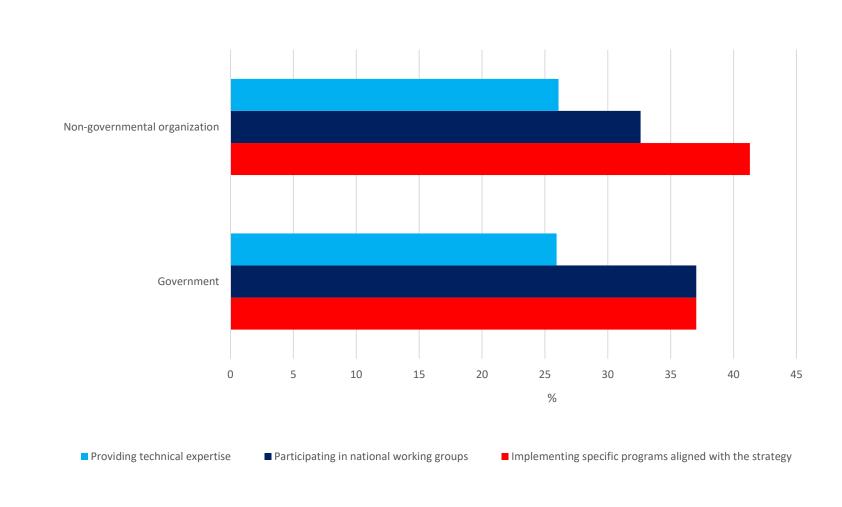

Out of the 65
respondents, 42
confirmed that their
countries have a DRR
strategy, 18 were
unsure, and 5
indicated that their
countries do not have
a DRR strategy.

Institutional Contribution to the Implementation of the DRR Strategy

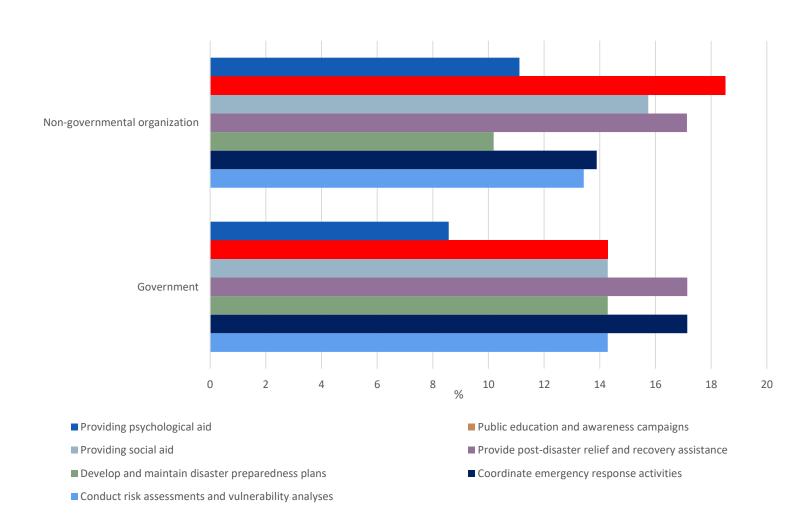

NGOs primarily contribute by implementing specific programs aligned with the strategy, with participation in national working groups being the second most common method.

Government
institutions use both
channels implementing specific
programs and
participating in
national working
groups – equally

Functions of the Institutions

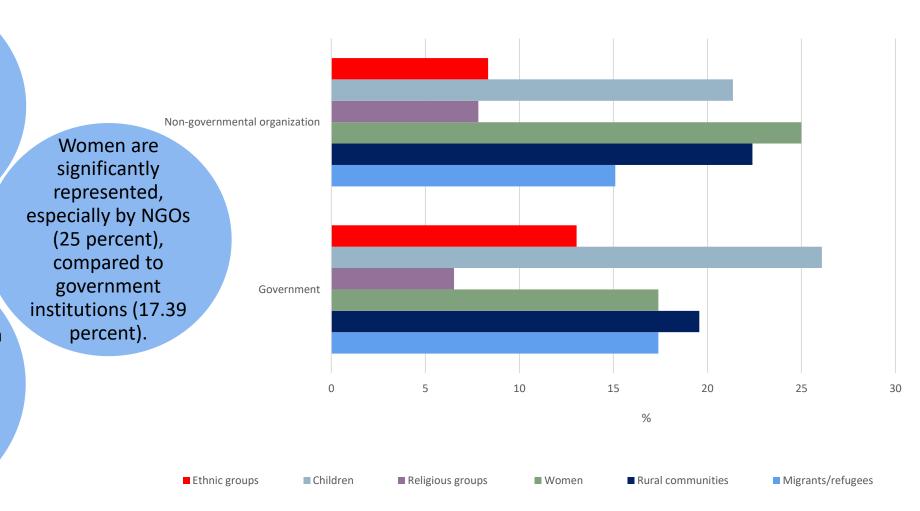

Both government and non-governmental organizations (NGOs) engage in various disaster-related activities, but with some differences in emphasis.

Disadvantaged Groups in DRR Plans

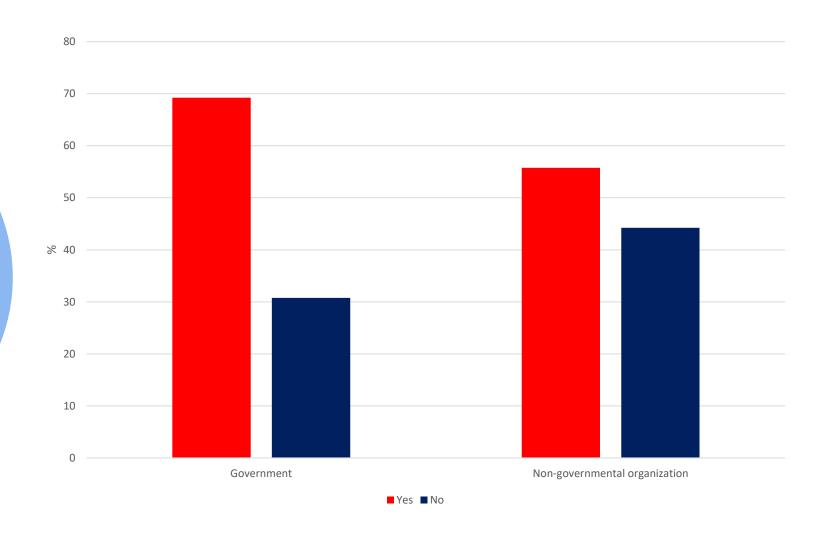

Both government and non-governmental organizations prioritize children, with 26.09 percent and 21.35 percent respectively.

Rural communities are also a key focus for both sectors, with 19.57 percent of government institutions and 22.40 percent of NGOs including them in their plans.

Existence of Public Awareness Program Targeting Low-Income Communities

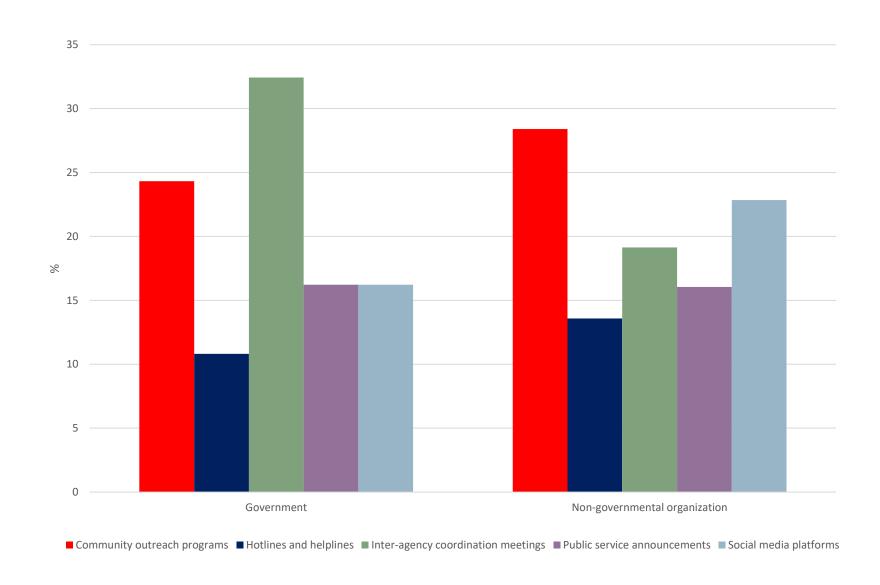

69 percent of respondents
from government
institutions and 56 percent
from NGOs reported having
public awareness programs
aimed at disaster
preparedness and mitigation
specifically aiming for lowincome communities

Communication Methods

Government institutions primarily rely on inter-agency coordination meetings (32.43 percent), emphasizing structured and formalized communication channels.

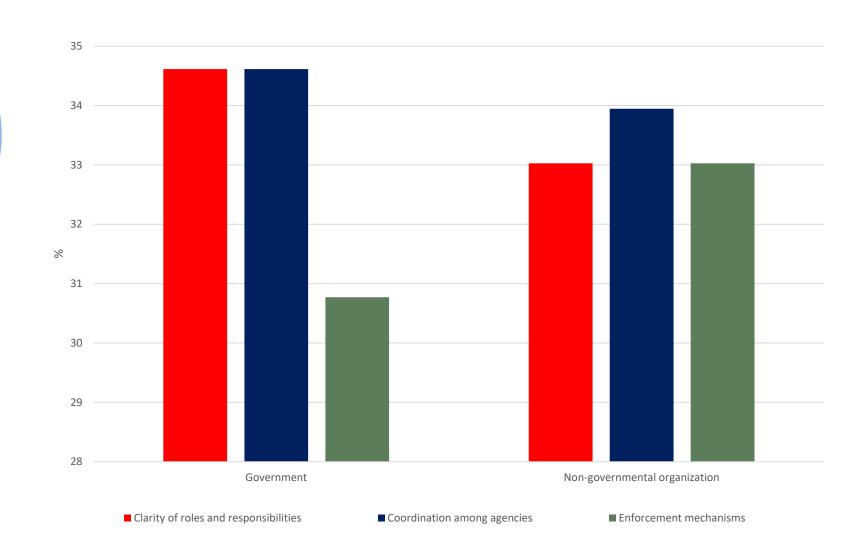

NGOs favor
community outreach
programs (28.40
percent) and social
media platforms
(22.84 percent),
indicating a stronger
emphasis on direct
and digital
engagement with
beneficiaries.

Need for Improvements in DRR

Government
institutions declare the
clarity of roles and
responsibilities and
coordination among
agencies as the main
points for
improvement.

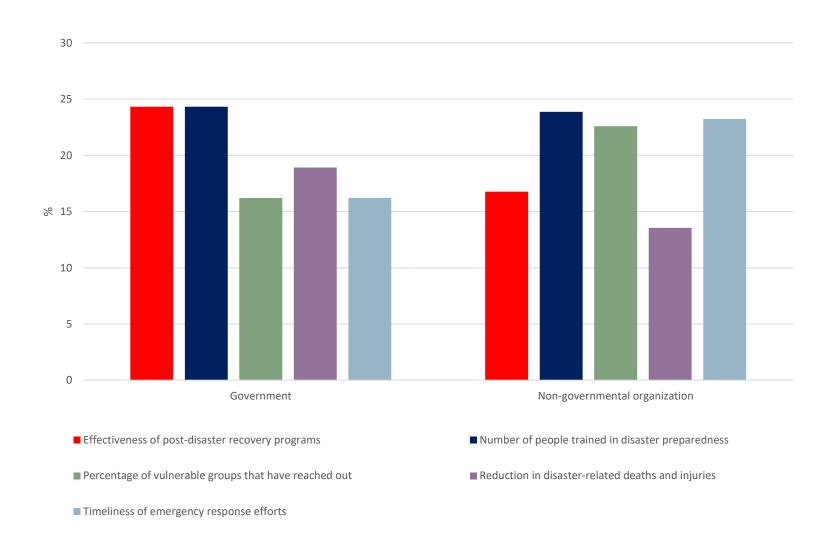

In addition to these two items, NGOs also mentioned enforcement mechanisms are also need to be improved

Performance Indicators

Both government agencies and NGOs emphasize the training in disaster preparedness. The effectiveness of post-disaster recovery programs is equally mentioned by Gov't institutions.

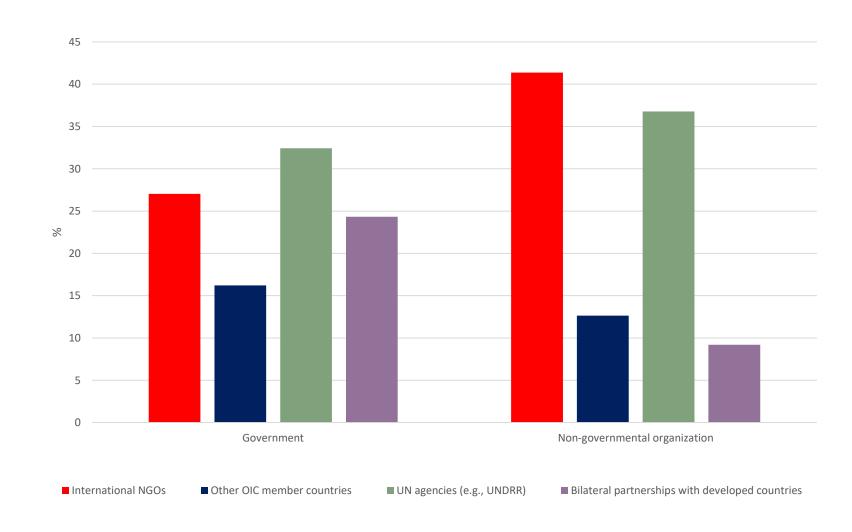

NGOs place greater emphasis on timelines of emergency response efforts and reaching exposed groups.

International Collaboration

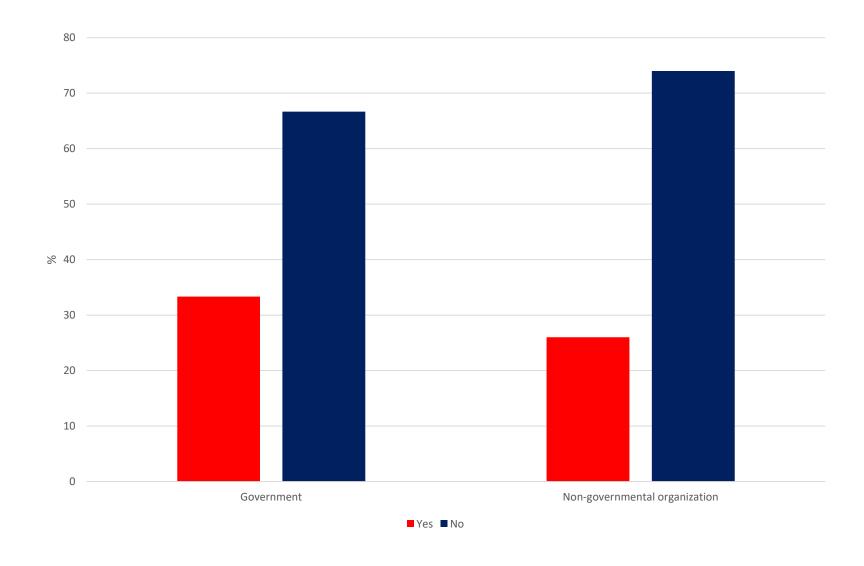

Governments mainly partner with UN agencies (32 percent) and international NGOs (27 percent), with significant bilateral ties to developed countries (24 percent).

In contrast, NGOs primarily collaborate with international NGOs (41 percent) and UN agencies (37 percent) and also engage with other OIC member countries (13 percent).

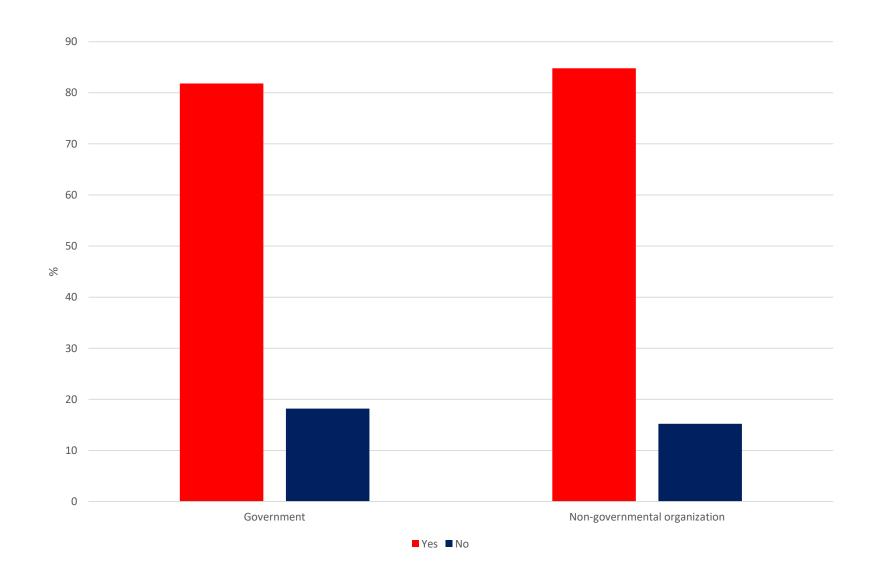

Existence of Budgetary Allocations for Disaster Management Initiatives in the Country

The majority of respondents from both government institutions (67 percent) and NGOs (74 percent) reported that the current budgetary allocations for disaster management are insufficient.

Existence of Budget Constraints of the Institutions

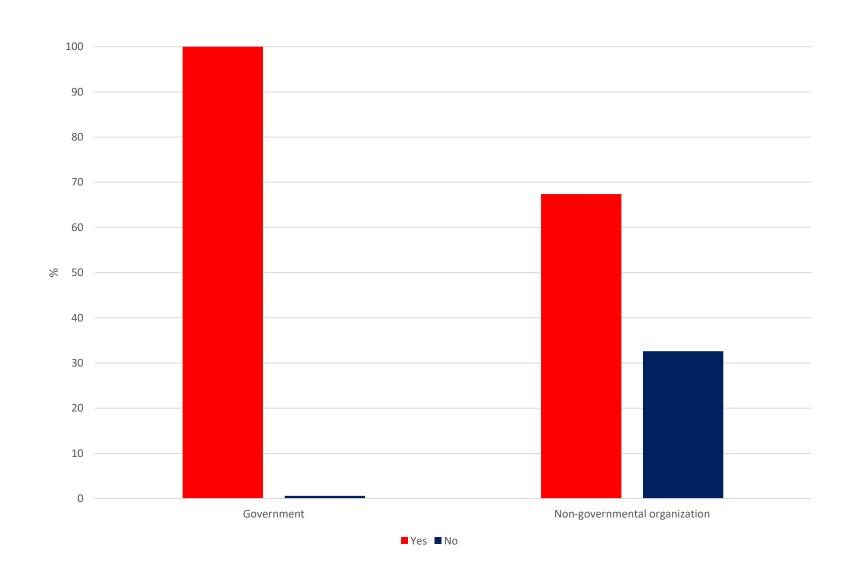

81 percent of the respondents from government institutions and 85 percent from NGOs reported experiencing significant budget constraints.

Staffing Shortages in the Country

Staffing shortages are a critical concern for government institutions, with all respondents indicating a lack of sufficient personnel.

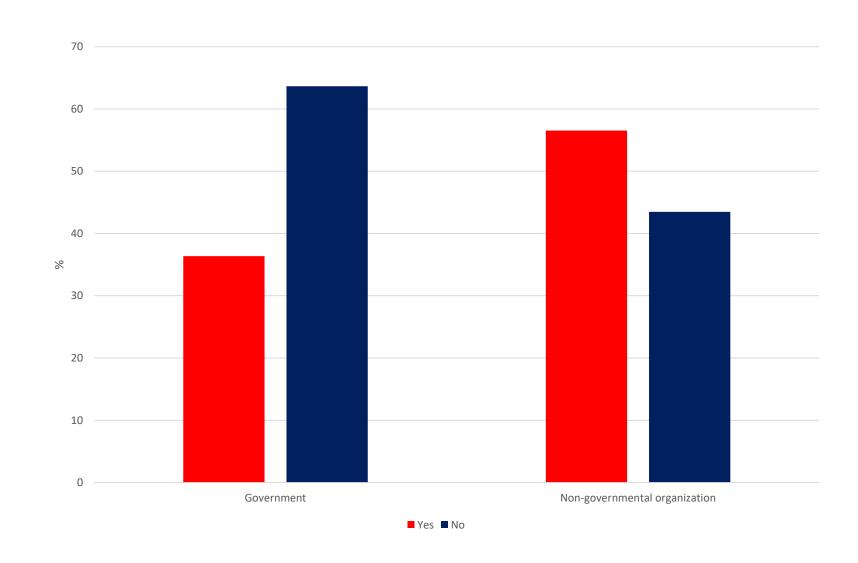

67 percent of NGO respondents also reported staffing shortages as a major limitation to their disaster management efforts.

Adequacy of Staffing within the Institution

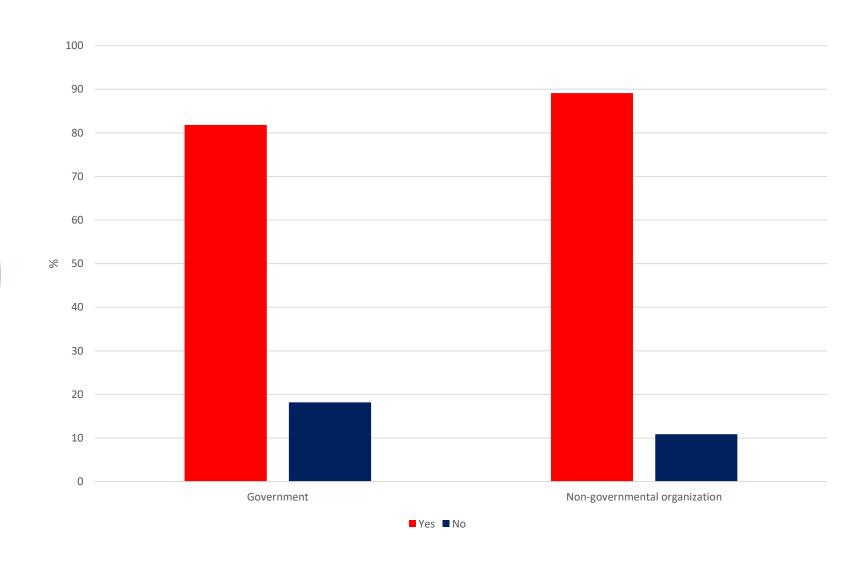

Only 36.36 percent of government respondents believe they have adequate staffing, while a significant 63.64 percent reported insufficient staff.

In contrast, 56.52
percent of NGO
respondents
indicated they have
adequate staffing,
whereas 43.48
percent do not.

Existence of Feedback from All the Stakeholders for DRR Plan

A majority of both government institutions and non-governmental organizations (NGOs) include stakeholder feedback in their DRR plans

To sum up

DRR Strategies: Present but gaps in budget, staff, and inclusion of vulnerable groups

NGOs: Focus on public education, awareness, and humanitarian aid; limited resources

Government Institutions: Focus on emergency response and policy; need better funding and frameworks

Collaboration: Key with international organizations, especially UN agencies

Improvement Areas:

- Climate change integration
- Community engagement and training
- Disaster-resistant infrastructure

Thank You...
